

# ADDITION AND SUBTRACTION

## ■ A NOTE FROM TARA WEST

The Computation Problems packet offers 15 all-in-one sheets designed to give students an engaging way to practice addition and subtraction equations within 10. Each sheet integrates an equation to solve, ten frame, equation statement box, horizontal number path, and an additional space for an illustration, and/or cut and paste images. This packet can be used as an independent math center, whole-group math component, math intervention, and/or as additional practice for early finishers. If you have questions as always, feel free to email: [littlemindsatworkllc@gmail.com](mailto:littlemindsatworkllc@gmail.com), follow me on [Facebook](#), or visit my website, [Little Minds at Work](#).

$2 + 3$ 

The first step in the process of identifying a problem is to recognize that there is a problem. This can be done by looking at the current situation and comparing it to what you would like to see. Once you have identified a problem, the next step is to determine its causes. This can be done by asking questions such as "What are the factors contributing to this problem?" and "Why is this happening?" The third step is to develop a plan to solve the problem. This can be done by brainstorming ideas and choosing the one that seems most likely to work. Finally, the fourth step is to implement the plan and evaluate the results. If the problem has been solved, then the process is complete. If not, then you may need to go back to the beginning and start over.
